

Booster Pump Packages

Integrate your rainwater tank and filter into an automated urban rainwater harvesting or garden irrigation system to gain maximum benefit from collected rainwater. Specify a Halsted Rain booster pump package that is specifically designed to utilise rainwater for toilet flushing and garden irrigation.

Internal packages

Completely self-contained in a sturdy plastic shell, the Halsted Rain internal booster pump is quick and easy to install, cost effective to run and operates on demand. The unit is self priming and will draw water from the rainwater tank at a rate of up to 5 litres per minute, filling a modern toilet cistern in less than a minute. The patented pump has been carefully selected by Halsted Rain for its performance

and reliability to meet the requirements of small and medium-sized rainwater installations.

The pump is installed using two lengths of flexible hose and 15mm push-fit connections (supplied) which will accept standard plastic plumbing pipe work. The unit is mains powered (230v AC) and supplied with a 2-metre lead and a standard 13amp plug. During normal operation it will draw around 0.35 amps – less than a 100w light bulb.

The pump can be supplied as a bare unit for installation by a qualified electrician, and larger versions of the pump are available for more demanding installations.

Garden Packages

Internal packages are also suitable for supplying water for garden use via an outside tap and hose providing the flow is regulated with a rose gun.

Irrigation systems typically require higher flow rates up to 60 litres/minute and we offer automatic and manual surface booster pumps to meet this requirement. They are free standing and are easily attached to a rainwater tank when in use (connecting hose and fittings included). Garden

packages are mains powered (230v AC) and supplied with a standard 13amp plug and should be operated through a Residual Current Device (RCD).

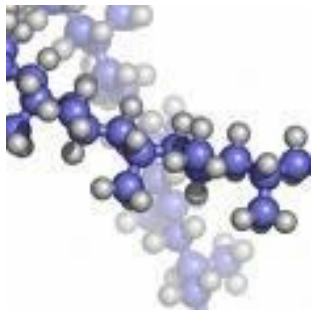

A fully automatic self priming model incorporates electronic controls that start the pump on demand and provide dry run protection.

More detailed specifications are available on request.

About Halsted Rain

Halsted Rain is a supplier of urban rainwater harvesting solutions. We offer a range of products including tanks, filters, pumps and accessories specifically designed for above ground rainwater collection and utilisation systems that can be installed in a confined space. Our products are ideally suited for installation on domestic and light commercial property particularly as a retrofit solution. Halsted Rain prides itself on its ability to offer customers;

- Proven and easy to install products
- A comprehensive range of compatible products and accessories
- Reliable service
- Affordable prices
